

Chinese White Dolphin Ecology Field Trip

On August 8, 30 F4 to F5 students participated in the Chinese white dolphin ecology field trip organized by our school and the City University of Hong Kong. During the event, we travelled from Tung Chung to the natural habitat of Chinese white dolphins - Sa Chau and Lung Kwu Chau by boat.

In the event, cetacean experts from CityU introduced the habitats and ecological facts about Chinese white dolphins as well as threats they are currently facing.

This activity not only allows students to get to know wild dolphins, but most importantly, they can also learn about how to conserve them, then to contribute to the preservation of the wild ecology of Hong Kong.
